Hirsch, K.G.; Pinedo, M.M.; Greenlee, J.M. 1996. An international collection of wildland-urban interface resource materials. Nat. Resour. Can., Can. For. Serv., Northwest Reg., North. For. Cent., Edmonton, Alberta. Inf. Rep. NOR-X-344.

ABSTRACT

A bibliographic listing of about 2200 wildland-urban interface resource materials that have been compiled by the International Association of Wildland Fire and the Canadian Forest Service, Northern Forestry Centre are listed alphabetically by author. Most items in this collection were produced prior to 1993 and pertain to the United States, Australia, and Canada. They provide information on a diverse spectrum of topics related to fire management in the wildland-urban interface ranging from building materials and hazard reduction techniques to disaster management, politics, and sociological issues. The citations have been indexed by subject, using over 50 headings, and according to three general categories: general and technical materials, newspaper articles, and public education materials.

RÉSUMÉ

Liste bibliographique (par ordre alphabétique d'auteur) de quelque 2 200 documents portant sur la gestion des zones d'interface forêt-agglomération, compilée par l'International Association of Wildland Fire et le Service canadien des forêts, Centre de foresterie du Nord. La plupart des documents répertoriés datent d'avant 1993 et concernent les États-Unis, l'Australie et le Canada. Ils contiennent de l'information sur une grande diversité de sujets concernant la gestion des feux dans les zones d'interface forêt-agglomération, depuis les matériaux de construction et la réduction des risques jusqu'à la gestion, la politique et la sociologie des désastres. Les ouvrages ont été indexés par sujet (plus de 50 titres) et selon trois grandes catégories : documents à caractère général et technique, articles de journaux, documents d'information du public.

Recent incidents in many countries around the world have illustrated the potentially disastrous consequences of wildland fires in or near urban areas. Fire management in these wildland-urban interface (WUI) areas has been a concern for many decades; however, the escalation of urban development among or adjacent to wildlands has increased both the frequency and severity of interface fires. This has motivated wildland and structural suppression staff, land and resource planners, home owners and builders, insurance company representatives, elected officials, and many other individuals to search for new and alternative solutions to this growing problem. Fortunately, vast amounts of information have been produced on this multifaceted topic and there is a tremendous opportunity to benefit from the experiences and expertise of others. To assist in disseminating such information, this bibliography provides a listing of about 2200 resource materials that deal with the numerous aspects of fire management in the WUI.

This bibliography represents the collation of two collections of WUI resource materials that were independently assembled by the International Association of Wildland Fire (IAWF) and the Canadian Forest Service (CFS), Northern Forestry Centre. Initial information for about three-quarters of the citations was obtained from the International Bibliography of Wildland Fire, which was developed over the last 20 years and is maintained by the IAWF (1992). The IAWF collection covers a wide range of subject areas and provides brief citations for many historically significant events, primarily in the United States. Conversely, the CFS collection (Hirsch et al. 1993) consists of roughly 600 items, many of which are from outside the United States and have been produced in the last 5 to 10 years.

The resource materials listed in this bibliography were obtained:

- (a) from the private collections of a number of individuals,
- (b) by reviewing previously published bibliographies (Donoghue et al. 1989; National Fire Protection Association 1991; National Wildfire Coordinating Group 1992),
- (c) by conducting searches of libraries (NoFC, University of Alberta, Alberta Agriculture) and

abstracts (i.e., Forestry Abstracts, Scientific Abstracts, AGRICOLA (Agricultural On-Line Access), and CAB (Commonwealth Abstract Bureau) data bases),

- (d) through directly contacting over 100 fire and resource management agencies in Australia, Canada, and the United States (see Appendix I for addresses of contributing organizations), and
- (e) by reviewing the literature citation sections of over 25 major WUI publications.

Given the diverse and complex nature of fire management in the WUI, it was not possible to create an all-inclusive WUI bibliography. This collection does, however, contain items from a wide range of related subject areas including: building design and materials, disaster management and natural hazards, land use planning and development, politics, public education, psychology, sociology, and fire suppression. Most materials in this bibliography were selected because they have a direct link to fire management in the WUI (e.g., fuels management, hazard reduction, fire suppression techniques), but certain items that could provide an introduction or pathway to broader but still applicable topics (e.g., fire management issues and alternatives, social and psychological issues) were also included.

The types of resource materials contained in this bibliography range from brochures and audiovisual materials to technical reports and research papers. Numerous newspaper articles, principally from a few major newspapers in the western United States, are also listed. Unpublished materials were generally excluded from the bibliography unless they were considered highly significant and were produced by an established and still operating organization. The citations range in date from the late 1800s to mid-1993, with most of the materials having been produced since 1980. In geographic terms, the majority of the resource materials are from the United States, Australia, and Canada. Unfortunately, the collection has very few items from other countries, even though major WUI incidents have occurred in places such as France, China, and Spain.

The style of this bibliography and the citation format was selected so that the reader would be able to obtain almost any item through a library or directly from the publisher. If this is not possible, most of the resource materials are or can be made available through the IAWF for a nominal fee (in most cases).

This bibliography is intended to provide information on a wide variety of topics related to fire management in the wildland-urban interface. It represents an extensive collection of resource materials but it in no way lists all of the items available in all subject areas. Readers are encouraged to forward suggested material to the IAWF for possible inclusion in updates or subsequent editions of this bibliography. Ultimately, the authors hope that this bibliography will assist in the sharing of ideas, opinions, and experiences that will, in turn, lead to new solutions for fire management problems in the wildland-urban interface.

Any project of this size requires the support, talents, and cooperation of a large number of people to be successful. The authors specifically thank: Greg Baxter and Craig Halun for their efforts on the initial compilation of materials, Tim Gauthier and Mary Hirsch for their help with keywording and indexing, Joyce Simunkovic and Elaine Schiewe for their excellent word processing, Brenda Laishley for her constructive editorial remarks, and the many individuals and organizations that provided resource materials and citations. The authors

acknowledge the International Association of Wildland Fire, without whose support the project could not have been completed. The assistance of the manuscript reviewers (Marty Alexander, Bill Baden, Jack Cohen, Johann Goldammer, Cecile Grant, Dan Madryzkowski, Xiaowen Li, and Dave Thomas) and the support expressed for this project by Bryan Lee and Dennis Dubé is gratefully acknowledged. The financial assistance of the Canada-Alberta Partnership Agreement in Forestry, Canada-Saskatchewan Partnership Agreement in Forestry, and the National Fire Protection Association is sincerely appreciated.
